

TechVault Our Premium Backup Program

OUR PLATFORM

Our backup plan, TechVault, offers triple layer backup protection for your business.

Here's what we mean, traditional backup efforts may only deploy one method towards securing your data. If that one method fails, your data could be gone for good.

By approaching backups in layers, if one method fails or has a breach you're STILL covered.

WHY CHOOSE US?

TechVault is an integral part of our managed services plans and so it is included in ALL of our plans. Learn more about what a Valley Techlogic service plan can do for your business today.

CONTACT US

ONSITE

This backup is stored onsite, and backups are performed every 15 minutes. It is also backed up regularly to the cloud. Some of the benefits include faster access to your data if you need it and the fastest method of recovery.

CLOUD

This backup is stored remotely in the cloud. You won't have any maintenance associated with this backup we'll handle it all. If a server failure were to occur to your onsite backup this backup would have you covered.

ARCHIVAL

This backup is unique in that your data is recorded once and then stored. This backup won't have the most up to date version of your data. However because it's a write once read many (WORM) copy of your data it is immutable to changes - and therefore very secure.
